A boring (academic) title or a clever title?
A secondary title

YOUR NAME HERE   *Washington State University*

In this article we compare the *empirical characteristic function* (**??**) to a *moment-generating-functional form* to compute the proportion of hypotheses m that are rejected under the null hypothesis.

Here is a second paragraph of the abstract (if necessary), and with the pipe notation it doesn't break. Notice it still needs to be indented.

Generally, we write this abstract last. Often it is called the executive summary. It should succinctly summarize the entire document. You can include references such as this one to the Appendices section **??** if necessary.

Keywords: multiple comparisons to control; multivariate chi-square distribution; nonlinear growth curves; Richard's curve; simulated critical points

Table 1: Descriptive Statistics and Correlation Analysis

	M	SD	1	2
1 Diameter (in)	13.2	3.14	1	
2 Height (ft)	76.0	6.37	.52**	1
3 Volume (ft³)	30.2	16.44	.97***	.60***

Notes: Pearson pairwise correlations are reported; a two-side test was performed to report correlation significance.

$^{†}p < .10$ $^{*}p < .05$ $^{**}p < .01$ $^{***}p < .001$

Table 2: Descriptive Statistics and Correlation Analysis

	M	SD	1	2	3	4	5
1 Diameter (in)	13.2	3.14	1				
2 Height (ft)	76.0	6.37	.52**	1			
3 Volume (ft³)	30.2	16.44	.97***	.60***	1		
4 Diameter (in)	13.2	3.14	1.00***	.52**	.97***	1	
5 Height (ft)	76.0	6.37	.52**	1.00***	.60***	.52**	1
6 Volume (ft³)	30.2	16.44	.97***	.60***	1.00***	.97***	.60***

Notes: Pearson pairwise correlations are reported;
a two-side test was performed to report correlation significance.

$^{\dagger}p < .10$ $^{*}p < .05$ $^{**}p < .01$ $^{***}p < .001$
